Career Opportunities

Clinical Trials is a rapidly expanding field, creating exciting opportunities for trained professionals.

Graduates of this program are employed in both the hospital sector and research industries and can advance to project management roles. Both office-based and home-based positions are available. CRAs work in a broad range of research settings, including:

- Academic health centers
- Government agencies and departments
- Contract research organizations
- Private companies, such as pharmaceutical, biotechnology, and medical device firms

Course Delivery

This CRA Certificate course can be completed entirely on-line while working with an assigned instructor. All materials required for the course are delivered online, so there is no need to purchase additional texts. You are at liberty to download and/or print the materials as necessary.

The material is divided into 17 Modules, each of which requires you to complete an exam and/or assignment allowing us to assess your comprehension of the material. Your performance will be based on the completion of your assignments, as there will be **no final examinations**. Upon completion of the course of study you will receive your Certificate of completion, which qualifies you for CRA positions in any company in the clinical research industry throughout North America, UK, EU, and Internationally.

You will also have an online instructor who will monitor your performance and providing feedback on your answers. Throughout the course, he/she will get to know each student very well and will be able to make a recommendation on your abilities to prospective employers. All our instructors are highly qualified individuals who are currently working in the industry, so this is also an opportunity for you to gain some inside knowledge on how these companies work, how to get through your internship, and how to stay employed after your initial internship/trial period.
